

Sociavi Galleries

Summary

Through SOCIAVI residents and their families will have the opportunity to interact as frequent as they want, enhancing the emotional quality of life of seniors and their families. With SOCIAVI, sharing moments is simple, easy and constant.

Overview

The following picture shows an overview of Sociavi Galleries.

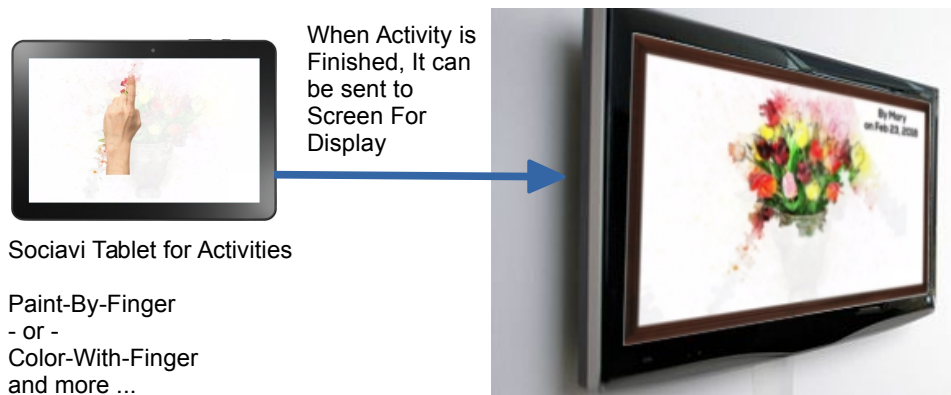

Figure 1: Sociavi Tablet for Activities

Sociavi Galleries is a new module in the Sociavi platform. The purpose of this module is to be used as an art therapy activity in small group settings. It consists of the Sociavi Tablet for Activities and a large projector, which could be a large television screen.

With the Sociavi Tablet for Activities, residents can participate in engaging creative activities on their own and with the themes that are meaningful to them, and they only require one finger.

For example, Paint-By-Finger allows them to discover the image as they move their finger through the surface of the tablet.

Once the activity is finished, the result can be sent to the screen for display. Thus, not only the resident, but the whole community as well as family members and visitors can see what they did.

The activity types in the Sociavi Galleries module are:

Paint By Finger, Color By Finger, Color By Number, Free Paint

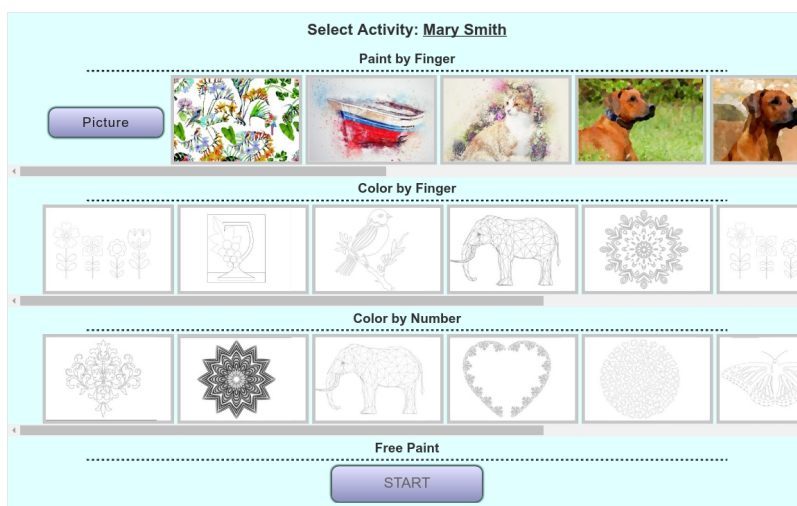

Figure 2: Options

Every activity type has templates to choose from, except the "Free Paint" type, where seniors can create whatever they want.

In Paint By Finger there is an extra option, which is "Picture". In this case, someone can take a picture, even a picture of the senior, and they will discover the picture taken by moving their finger through the surface of the tablet.

The following explanatory videos show the concept:
